First Midterm Exam – Version A

February 3, 2017

Surname \_\_\_\_\_ First Name \_\_\_\_\_

Student # \_\_\_\_\_ DGD \_\_\_\_\_

**Instructions:**

- (a) You have 80 minutes to complete this exam.
- (b) All work to be considered for grading should be written in the space provided. The reverse side of pages is for scrap work. If you find that you need extra space in order to answer a particular question, you should continue on the reverse side of the page and indicate this **clearly**. Otherwise, the work written on the reverse side of pages will not be considered for marks.
- (c) Write your student number at the top of each page in the space provided.
- (d) No notes, books, scrap paper, calculators or other electronic devices are allowed.
- (e) You are strongly recommended to write in **pen**, not pencil.
- (f) You may use the last page of the exam as scrap paper.
- (g) Cellular phones, unauthorized electronic devices or course notes (unless an open-book exam) are not allowed during this exam. **Phones and devices must be turned off and put away in your bag**. Do not keep them in your possession, such as in your pockets. If caught with such a device or document, the following may occur: you will be asked to leave immediately the exam and academic fraud allegations will be filed which may result in you obtaining a 0 (zero) for the exam.

**By signing below, you acknowledge that you have ensured that you are complying with the above statement.**

Please do not write in the table below.

Question	1	2	3	4	5	6	Total
Maximum	4	3	2	4	5	3	21
Grade							

1. [4 points] Determine if the matrix equation

$$\begin{bmatrix} 1 & -2 & 2 & -1 \\ -1 & 2 & 0 & -1 \\ 2 & -4 & 4 & -2 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ t \end{bmatrix} = \begin{bmatrix} -2 \\ -4 \\ -4 \end{bmatrix}$$

is consistent or inconsistent. If the linear system is consistent, write its general solution in vector parametric form.

MAT 1302B First Midterm Exam

2. **[3 points]** Determine all values of the parameter  $h$  such that the linear system

$$\begin{cases} 2x_1 = 2x_2 + x_3 + 4 \\ x_1 = x_2 - hx_3 - 3 \end{cases}$$

is inconsistent. You should justify your answer.

MAT 1302B First Midterm Exam

3. Compute the following:

(a) [1 point]  $\begin{bmatrix} 4 & -3 & -1 \\ 2 & 0 & -1 \\ -4 & 1 & 3 \end{bmatrix} \begin{bmatrix} -2 \\ 1 \\ 1 \end{bmatrix}$

(b) [1 point]  $-3\mathbf{u} + 2\mathbf{v}$  where  $\mathbf{u} = \begin{bmatrix} 1 \\ -2 \\ 1 \end{bmatrix}$  and  $\mathbf{v} = \begin{bmatrix} 3 \\ -1 \\ -2 \end{bmatrix}$ .

4. [4 points] Set

$$\mathbf{a}_1 = \begin{bmatrix} 1 \\ -2 \\ 3 \\ -1 \end{bmatrix}, \mathbf{a}_2 = \begin{bmatrix} 2 \\ 1 \\ 1 \\ 3 \end{bmatrix}, \mathbf{a}_3 = \begin{bmatrix} -1 \\ 0 \\ -1 \\ 2 \end{bmatrix}, \text{ and } \mathbf{b} = \begin{bmatrix} -3 \\ 1 \\ -4 \\ 2 \end{bmatrix}.$$

Does  $\mathbf{b}$  belong to  $\text{Span}\{\mathbf{a}_1, \mathbf{a}_2, \mathbf{a}_3\}$ ? You should justify your answer.

5. [5 points] For each of the following statements, indicate if it is true or false. You will receive 1 point for every correct answer and lose .5 points for every incorrect answer (but you cannot receive a negative mark on this question).

\_\_\_\_\_ A homogeneous linear system with  $n$  equations and  $n$  variables always has a unique solution.

\_\_\_\_\_ For any vectors  $\mathbf{a}, \mathbf{b}, \mathbf{c}$  in  $\mathbb{R}^3$ , the vector  $-2\mathbf{a}+\mathbf{b}-3\mathbf{c}$  always belongs to  $\text{Span}\{\mathbf{a}, \mathbf{b}, \mathbf{c}\}$ .

\_\_\_\_\_ A consistent linear system with a  $4 \times 6$  augmented matrix will have infinitely many solutions.

\_\_\_\_\_ If a  $4 \times 5$  matrix  $A$  has 4 pivot positions, then for every vector  $\mathbf{b}$  in  $\mathbb{R}^4$  the matrix equation  $A\mathbf{x} = \mathbf{b}$  has a solution.

\_\_\_\_\_ Two row equivalent matrices which are both in echelon form must be equal.

6. Consider the traffic flow described by the following diagram. The letters  $A$  through  $D$  label intersections. The arrows indicate the direction of flow (all roads are one-way) and their labels indicate flow in cars per hour.

(a) [2 points] Write down a linear system describing the traffic flow, i.e., all constraints on the variables  $x_i, i = 1, \dots, 6$ . (You do not need to solve the linear system.)

(b) [1 point] The reduced row echelon form of the augmented matrix corresponding to the linear system in part (a) is:

$$\left[ \begin{array}{cccccc|c} 1 & 0 & 0 & 0 & -1 & 0 & 150 \\ 0 & 1 & 0 & 0 & 1 & 1 & 150 \\ 0 & 0 & 1 & 0 & 0 & -1 & -50 \\ 0 & 0 & 0 & 1 & 0 & 0 & 150 \\ 0 & 0 & 0 & 0 & 0 & 0 & 0 \end{array} \right]$$

Write down the general flow pattern.
