Second Midterm Exam – Version A

March 3, 2017

Surname \_\_\_\_\_ First Name \_\_\_\_\_

Student # \_\_\_\_\_ DGD \_\_\_\_\_

**Instructions:**

- (a) You have 80 minutes to complete this exam.
- (b) All work to be considered for grading should be written in the space provided. The reverse side of pages is for scrap work. If you find that you need extra space in order to answer a particular question, you should continue on the reverse side of the page and indicate this **clearly**. Otherwise, the work written on the reverse side of pages will not be considered for marks.
- (c) Write your student number at the top of each page in the space provided.
- (d) No notes, books, scrap paper, calculators or other electronic devices are allowed.
- (e) You are strongly recommended to write in **pen**, not pencil.
- (f) You may use the last page of the exam as scrap paper.
- (g) Cellular phones, unauthorized electronic devices or course notes (unless an open-book exam) are not allowed during this exam. **Phones and devices must be turned off and put away in your bag**. Do not keep them in your possession, such as in your pockets. If caught with such a device or document, the following may occur: you will be asked to leave immediately the exam and academic fraud allegations will be filed which may result in you obtaining a 0 (zero) for the exam.

**By signing below, you acknowledge that you have ensured that you are complying with the above statement.**

MAT 1302B Second Midterm Exam

1. Let

$$A = \begin{bmatrix} 1 & -2 \\ 0 & 1 \\ -1 & -2 \end{bmatrix} \quad \text{and} \quad B = \begin{bmatrix} 1 & 1 \\ -2 & 0 \\ -3 & \frac{1}{2} \end{bmatrix}$$

Also, let  $I_2$  denote the  $2 \times 2$  identity matrix. In parts (a) and (b) below, calculate the given matrix expressions explicitly.

(a) **[2 points]**  $A^T B - 2I_2$

(b) **[2 points]**  $(A^T A)^{-1}$

2. [5 points] For each of the following statements, indicate if it is true (**T**) or false (**F**). You will receive 1 point for each correct answer and  $-0.5$  points for each incorrect answer (but you cannot receive a negative score on this question).

\_\_\_\_\_ The reduced echelon form of an invertible  $n \times n$  matrix is the identity matrix  $I_n$ .

\_\_\_\_\_ If  $A$  is an  $n \times n$  matrix such that the homogeneous linear system  $A\mathbf{x} = \mathbf{0}$  has infinitely many solutions, then  $A$  is invertible.

\_\_\_\_\_ The vectors  $\left\{ \begin{bmatrix} 1 \\ 0 \\ -3 \end{bmatrix}, \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ -2 \end{bmatrix} \right\}$  are linearly independent.

\_\_\_\_\_ For every two  $n \times n$  matrices  $A$  and  $B$ , we have  $(A + B)^T = B^T + A^T$ .

\_\_\_\_\_ For three  $n \times n$  matrices  $A$ ,  $B$ , and  $C$ , if  $AB = AC$  then we necessarily have  $B = C$ .

MAT 1302B Second Midterm Exam

3. [4 points] Is the matrix

$$A = \begin{bmatrix} 1 & -2 & 2 \\ 1 & -1 & 2 \\ 1 & -2 & 3 \end{bmatrix}$$

invertible? If the answer is yes, determine its inverse.

4. An economy consists of two sectors: Agriculture and Manufacturing. In order to produce 1 unit of output, the Agriculture sector uses  $\frac{5}{8}$  units from the Agriculture and  $\frac{1}{8}$  units from the Manufacturing sector. Further, to produce 1 unit of output, the Manufacturing sector uses  $\frac{1}{4}$  units from the Agriculture and  $\frac{1}{4}$  units from the Manufacturing sector.

(a) [**1 point**] Write down the consumption matrix  $C$  for this economy.

(b) [**1 point**] What intermediate demands are created if Manufacturing is supposed to produce 16 units, and simultaneously Agriculture is supposed to produce 8 units?

The intermediate demands are \_\_\_\_\_ units from Agriculture and \_\_\_\_\_ units from Manufacturing.

(c) [**3 points**] Determine the production levels required to meet a final demand of 4 units from the Agriculture sector and 6 units from the Manufacturing sector.

The required production levels are \_\_\_\_\_ units from Agriculture and \_\_\_\_\_ units from Manufacturing.

5. [5 points] Consider the vectors

$$\mathbf{v}_1 = \begin{bmatrix} 1 \\ 0 \\ 3 \end{bmatrix}, \mathbf{v}_2 = \begin{bmatrix} 2 \\ 2 \\ 4 \end{bmatrix}, \mathbf{v}_3 = \begin{bmatrix} -2 \\ -1 \\ -5 \end{bmatrix}$$

Are the vectors  $\mathbf{v}_1$ ,  $\mathbf{v}_2$ , and  $\mathbf{v}_3$  linearly independent? If they are linearly dependent, then write down a linear dependence relation for these vectors. You should justify your answers.

MAT 1302B Second Midterm Exam

6. **[3 points]** Let  $A = \begin{bmatrix} 1 & -1 \\ 0 & 2 \end{bmatrix}$ , and let  $B$  be a  $2 \times 3$  matrix. Suppose that the second row of  $(AB)^T$  is

$$\mathbf{v} = [-1 \quad 3].$$

Compute the second column of  $B$ .
